CGPA-10

PROJECTS

My_dodge

- Developed a django based web app to automate the making of the outpass for the girl students of the institute
- The basic aim of the project is to save the time taken in making an outpass manually by creating separate login accounts for the students who can in turn send requests to the warden so that she can accept the request and issue a softcopy of the outpass for the same.
- Tools used - PyCharm, Django, Bootstrap

Recommender_system

- A basic movie recommender made in python
- Tools used - Atom, pandas and numpy libraries

perCeption

- A web based sentiment analyser using the django framework
- Tools used - PyCharm, Vader sentiment module in python, Django, Bootstrap

Iris_Flower_Project

- A basic python based machine learning project that finds the best algorithm to classify the iris flowers
- Tools used - Atom, Pandas and Scikit Learn libraries

Tip_Calculator

- A basic web based tip calculator
- Tools used - Visual Studio Code, HTML, CSS, JavaScript

Online Desktop based Examination System

- Examination with time limit of 1 hour containing single-correct, multi-correct and integer type questions.
- The user can bookmark the questions he/she wants to revisit.
- Tools used- Netbeans, Java along with JavaFX

COURSES
